

beem063 Hackathon Main Report Brief 2026

80% of your grade on this module is determined by a 3,000 word individual assignment that you will submit by **Friday 28th August** (2 weeks after your group submits the final group presentation on Friday 14th August). This report acts as a personal log (or diary) of your individual contributions to the group project, and a reflection on what was learnt from the experience.

1. Description of Proposal (500 words written at the start of project)

In this section you should write down a summary of your group's proposal as presented at the beginning of the project (in the proposal video). What is the group planning to create, and what will be your personal contribution to this? How successful do you think you will be and what assumptions are you making? Describe different scenarios for the final product that you think are realistic. What do you personally hope to learn and develop?

2. Personal Log (1000 words written during the project)

During the hackathon project working with your team mates, keep a simple log (or diary) of what you do. We recommend you write down your planned activities at the start of each week, with simple updates describing your activities and contributions. A weekly structure is sensible, but you do not necessarily have to record your contributions in this way, as long as you keep a clear record of what you contributed. It is likely that sometimes what you plan to do during a particular week does not go to plan – this is fine, and you should record this. This section is a straight forward, concise description of what you did, not a reflection on how it went (this is done in the next section). Note however that in the next section you reflect on your personal development, and it is good to see progress, so any time devoted to learning/building new skills should be recorded here.

3. Reflection on what you learned (1500 words written at the end of the project)

This section should compare your expectations of the project in part 1 at the beginning with how the project actually went in practice. Where appropriate you should reflect on:

- how the project went compared to your expectations in part 1
- examples of when things went better/worse than expected within particular stages
- your personal development (new skills, lessons learned)
- the quality of the final group product including whether it could have gone better, and what any potential investor in your product could do to take it to another level

In this part you will be given credit for authentic self-reflection, and thoughtful appraisal of the evolution and end result of your group project. This is an opportunity to show critical thinking. The overall assignment will be judged with the following weightings:

Value of individual contributions	40%
Completion of Personal Log	20%
Reflection on Project	40%
