

beem063 Hackathon Proposal Presentation Brief 2026

You will work together in your groups to prepare a video that you will submit online on **Monday 8th June**.

Your objective is to present ideas in a 5 minute video for a real FinTech product you plan to build during the summer.

You will draw inspiration from your training mentors, including Tony Wood who took you through a course on how to build a real FinTech business. When you submit your video, include any pitch deck that you built during his course, and feel free to adjust this before submission.

1. Feasibility

As a group, you will have from 8th June to 14th August (10 weeks) to work in your teams on creating your product. Your plans can change, but you should provide some kind of timeline indicating activities you will each undertake, and an agreement on how, and how often you will communicate as a group. For example you may decide to meet very briefly at a specific time each week just to give each other updates. Maybe two of you will work together more intensely on one specific activity for a week. It is important you are clear about how you each plan to manage your time all the way through, in such a way that your individual contributions maximise the team's final output.

2. Evidence of applying your knowledge (from training, the programme, and other)

You should be clear about what knowledge/skills each of you have, and whether it may be necessary to devote some time during the summer to adding to any of your existing skills. The product you propose should make the most of your knowledge and skills. Keep in mind that the training period included a taste of different approaches, and that you have to decide what to apply from your learning throughout the year and the hackathon training. Also keep in mind that the people involved in the training are available for you to ask questions too, if you have any (they are there to help you).

3. Consideration of the FinTech environment

On this programme you have explored FinTech from different perspectives. Your proposal should demonstrate understanding of the technical challenges you face, but also where relevant, the marketing and legal challenges. For example, in addition to knowing about the technical challenges, are there competitors already? How much (if anything) would customers be willing to pay to use your product, and what evidence is there? Is there any relevant law on data protection you need to consider? In terms of marketing, how should you pitch it, etc? Please consider these issues in addition to anything learnt with Tony and the other trainers. These criteria will be used to judge your submissions according to the following weightings:

	Weight
1. Feasibility	40%
2. Evidence of applying your knowledge	40%
3. Consideration of the FinTech environment	20%
